## Sustainable Operations

We are taking a broad, science-based approach to reducing carbon emissions and improving efficiency across our operations.

## Renewable Energy

As part of our goal to reach net-zero carbon by 2040, Amazon is on a path to powering our operations with 100% renewable energy by 2025—five years ahead of our original target of 2030. In 2020, we became the world’s largest corporate purchaser of renewable energy, reaching 65% renewable energy across our business.

# Buildings

Amazon operates hundreds of world-class facilities in cities across the globe that serve our customers and support our local communities. We are designing buildings that help lead the industry toward net-zero carbon, while improving the resource efficiency of our facilities and prioritizing the health and wellness of our building occupants.

## Shipment Zero

**Shipment Zero is our goal to deliver 50% of Amazon shipments with net-zero carbon by 2030.**

This means that the fulfillment operations we undertake to deliver customer shipments are net-zero carbon—from the fulfillment center where an item is picked off the shelf, to the materials used to package the item, and the mode of transportation that gets the package to the customer's door.

## Carbon Footprint

Amazon's corporate carbon footprint quantifies the total greenhouse gas emissions attributed to our direct and indirect operational activities. We measure our total impact on the climate, map the largest activities contributing to this impact, and develop meaningful carbon reduction strategies to reach net-zero carbon emissions across our business by 2040.

## Transportation

We rolled out the first of our custom electric delivery vehicles in Los Angeles in February 2021, and will expand to up to 15 additional U.S. cities by the end of the year. We plan to have 10,000 vehicles on the road as early as 2022 and 100,000 vehicles deployed by 2030.
