### Our Impact

The Walt Disney Company's commitment to environmental stewardship goes back to our founding nearly 100 years ago. Here are just a few ways we are focused on helping to protect the planet we all share.

#### Reducing Emissions

Walt Disney World® Resort and Reedy Creek Improvement District teamed up with local utility partners to begin development of two new 75MW solar facilities, which are expected to come online in FY23. The new facilities, paired with two existing facilities, are projected to bring the Walt Disney World Resort's renewable energy consumption up to 40% of its total electricity use.

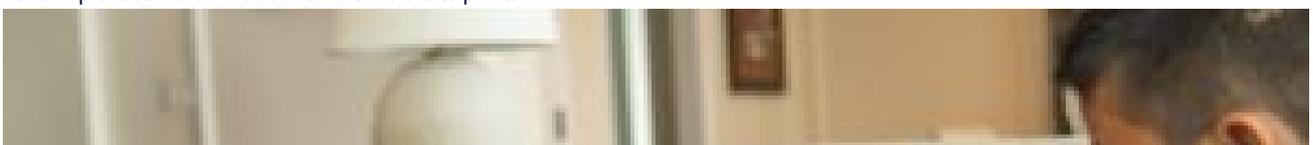

### **Conserving Water**

Through water conservation efforts and use of reclaimed water, we are working to reduce potable water consumption at our operations. Recently, Shanghai Disney Resort converted 100% of the toilets in their Team Disney Administration building restrooms from potable water to non-potable, saving 2.1M gallons of potable water in 2021. The project is now expanding at the Resort, with additional installations coming in 2022.

### **Reducing Waste**

We eliminated single-use plastic straws and stirrers at all owned and operated locations globally, a reduction of more than 175M straws and 13M stirrers per year. Meanwhile, organic waste from Walt Disney World is sent to an off-site composting facility where it is turned into a nutrient-rich soil product and can be used to fertilize onsite plants.

### **Lower Impact Products**

We redesigned our iconic Core Classic dolls to feature [plastic-free packaging](#) that is made of 100% recyclable, sustainably sourced paper. It's also easier to open than traditional packaging, providing a more accessible unboxing experience for kids and families.

### **Building Sustainably**

In collaboration with design teams across the Company, and leveraging the creative expertise of our Disney Imagineers, we have established a new, rigorous set of Sustainable Design Standards, aligned with our 2030 goals.

### **Greening Production**

Across hundreds of film and TV productions created by our studios each year, including Star Wars' "The Mandalorian", we are focused on reducing waste, switching to low emissions energy sources, and educating cast and crew on [environmental best practices](#).

### **Protecting Nature and the Climate**

For over a decade, Disney has invested in nature-based climate solutions. These natural places provide habitats for animals and resources for local communities, including food, shelter, and income, all while helping reduce the impact of climate change.

## **Zero Emissions**

Since 2009, Disney has operated under a long-term vision to reach net zero greenhouse gas emissions. We are addressing our emissions footprint first through avoided emissions, and then through emission reductions wherever possible, including by investing in low carbon fuel innovation and by powering our operations with zero carbon electricity. We will balance any remaining emissions with investments in high quality, verified emissions reductions (carbon credits) from projects around the world that promote improved land management, reforestation, and the protection and restoration of natural ecosystems.

We are committed to reducing our greenhouse gas emissions beyond our direct operations to include the production and delivery of our products and services, commonly referred to as Scope 3 emissions. Our intention is to define a science-based reduction goal for The Walt Disney Company's Scope 3 emissions footprint by the end of 2022.

## **Zero Emissions**

- Net zero emissions for direct operations by 2030
- 100% zero carbon electricity by 2030
- Innovation for low carbon fuels
- Invest in natural climate solutions
