

## Restricted Substance List (RSL)

This Restricted Substance List (RSL) is intended to provide apparel and footwear companies with information related to regulations and laws that restrict or ban certain chemicals and substances in finished home textile, apparel, and footwear products around the world.

The RSL was developed by a special working group of the American Apparel & Footwear Association's (AAFA's) Environmental Task Force. It serves as a practical tool to help individuals in textile, apparel and footwear companies, and their suppliers - responsible for environmental compliance throughout the supply chain - to become more aware of various national and international regulations governing the amount of substances that are permitted in finished home textile, apparel, and footwear products.

The RSL will be updated on a regular basis and will be supplemented with additional resources to help officials in these companies undertake responsible chemical management practices in the aforementioned finished products.

### English version:
