

Sustainability & ESG

Make Your ESG goals a reality.

Take a data-driven approach to building a more sustainable, resilient, and profitable business.

Energy majors are rebuilding their businesses around renewable power; logistics companies are racing to meet new fuel requirements; and financial service providers are managing ESG risk in investment portfolios – we must face this reality together.

We help our partners develop innovative, sustainable practices, meet the evolving demands of their clients and regulators, and connect daily operations to ambitious ESG agendas.

Get Started

A solution for every sector ↴

Our open data fusion platforms allow customers to integrate commercial data sources that can complement and enhance existing Palantir workflows inside the enterprise. Customers use our software to make sense of their own data.

Energy

A major energy company uses Palantir Foundry to track the Scope 1, 2, and 3 emissions associated with every part of its business.

Previously, the company's emissions metrics were siloed and only collected on an annual basis. Today, their metrics are derived from granular operational information, and they refresh automatically as the business changes.

Dynamic and precise emission numbers prepare the company to meet future mandatory reporting requirements and allow it to track progress toward its own aggressive net zero goals.

Utilities

We work with utilities providers to understand climate-related risks to their assets – such as floods and wildfires – and develop work plans to respond to risks efficiently.

Intelligent risk scoring across integrated grid data allows utilities to invest to meet the demands of growing technologies such as rooftop solar and distributed renewable generation.

→ [Listen](#) to Joy Didier and Olivier Farache on the *Investing in Zero* podcast explain how Palantir is helping its partners to build the “connected utility of the future”.

Combat unsustainable ESG Data

Oftentimes, unusable data prevents organizations from realizing their ESG goals. By making ESG data robust, integrated, and visible across an organization, Palantir gives decision makers a competitive advantage as the world adapts to the necessity of a more sustainable future – and the business challenges it presents.

- ↳ **Data Silos:** ESG is scattered across systems and comes from different parts of the organization.
- ↳ **Analytical Readiness:** Models are often siloed, and must be consistent for a proper accounting of environmental and financial impacts.
- ↳ **Tooling Gaps:** Leaders rarely see the sustainability impact of their decisions – increasingly important element of their business.

with a suite of powerful workflows

Our data platforms allow customers to integrate commercial data sources that can complement and enhance existing Palantir workflows inside the enterprise. Use our software to make sense of your own data.

Software-Defined Data Integration

Get Started

Integrate siloed data sources and models to provide a comprehensive picture of sustainability performance—and the associated costs and risks across an organization. Stakeholders can use this data to ask key questions about sustainability-related impacts.

Modelling

Intelligently link models to enable what-if scenario analysis and forecasting. With Foundry, you can conduct wide-ranging and complex cost-benefit analyses of sustainability decisions.

AI-Powered Applications

Model management and machine learning capabilities enable systems to learn from past decisions and update user recommendations. Models for cash flow at risk and for localized climate disruption can be strung together to create a custom risk framework.

Portfolio Management

Unify data with entity resolution to create a Sustainability 360 view for every customer, investment, and product. Test exposure to ESG risk in Foundry's advanced analytics suite and make informed changes at portfolio, sub-portfolio, and transaction level.

Dynamic Reporting

Create custom, auditable reporting templates that retain the links between the  the underlying models and data. Meet standardized report  such as the EU Taxonomy and TCFD disclosures.

Enabling Life Cycle Analysis and Emissions Accounting at Scale

PARTNER

A Fortune 100 Company

PROBLEM SPACE

A partner in manufacturing recently implemented ambitious carbon neutrality goals. It needed to find a way to measure its current footprint and adjust decision making at scale while preserving accuracy.

SOLUTION

Automatic emission factor monitoring

Simulation-ready modelling framework

Get Started

IMPACT AREAS

1B kg CO2 product-based computed emissions

\$2.2B sales volume coverage

8 Weeks

Prior to the engagement, the company had been able to calculate lifecycle emissions for less than 1% of its catalogue. Foundry was able to take that figure to nearly 10%.

Define the future of your organization today.
