

GRI reporting & performance data

A framework for our ESG reporting

Environmental, social and governance reporting enables us to achieve greater transparency about our performance on a variety of issues. It acts as a complement to our financial reporting, providing our stakeholders with a more holistic view of our future financial performance. We use the Global Reporting Initiative as the framework for our sustainability performance reporting.

Global Reporting Initiative: the standard on transparency

At Airbus, we voluntarily report on environmental, social and governance issues using the Global Reporting Initiative standards as a tool to disclose our sustainability data with transparency. This data has been externally audited since 2010.

In addition, we have been a signatory of the UN Global Compact since 2003. This voluntary initiative helps us to align our corporate strategy and business operations with the UN Global Compact's "Ten Principles" relating to [human rights](#), labour, [the environment](#) and [anti-corruption](#).

You can find links to information disclosure associated with each of the UN Global Compact principles in the box below. The Airbus Annual Report also serves as our UN Global Compact "Communication on Progress" report.

Our GRI index

The Global Reporting Initiative is the most widely adopted global sustainability reporting standard. We began taking the GRI standard into account in 2003 to better understand our impact on environmental, social and governance issues. Below is our GRI index, which indicates to what extent we take certain GRI indicators into account and where each indicator can be identified. For some indicators, we also refer to our Universal Registration Document in the Airbus Annual Report. The non-financial information can be found in the chapter 1.2, pages 55-118.
