RecyclableBlade
Siemens Gamesa is leading the way for a sustainable future with the RecyclableBlade, the first product to offer a comprehensive recyclable solution that is ready for commercial use both offshore and onshore.
The wind industry is still relatively young and is aware of the responsibility it holds of finding a sustainable way to deal with wind turbine components at the end of their life cycle. Increasing the recyclability of the wind components is high on our agenda, and we are committed to producing 100% recyclable turbines by 2040.

Delivering sustainability through actions

This decade will be judged on our ability to take the steps needed to keep global temperature rises this century to between 1.5 and 2.0 degrees Celsius, as well as deliver a fairer and more equal world. That is why as part of our Sustainability Vision 2040, we are focused not just on the targets we set, but instead on the actions that are needed to deliver on them.

SG 14-236 DD series

'I couldn't imagine working with anything else other than wind turbines!'

A couple of weeks ago, we followed the nacelle on its way to the test site, marking the beginning of the journey. In this second episode of the series, we talk to Sandra Them, technical product manager for the SG 14-236 DD, as the team completes the installation of the last tower section, making it ready for turbine installation.
