Azincourt Energy is a Canadian-based resource exploration and development company focused on the alternative fuels/alternative energy sector. Our core projects are in the clean energy space, with uranium exploration projects in the prolific Athabasca Basin, Saskatchewan, Canada, and lithium/uranium projects on the Picotani Plateau, Peru.

Azincourt’s expanding focus will allow the company to grow its evaluation in correlation to macro energy and fuels trends. Uranium for the nuclear industry, and battery metals such as lithium, cobalt, nickel, manganese, and graphite, are at the forefront of a changing focus in energy development. We are actively pursuing projects that position Azincourt for growth in this important sector.

Currently Azincourt is developing the East Preston uranium project, located in the prolific Athabasca Basin, with partners Skyharbour Resources (TSX.V: SYH) and Clean Commodities Corp (TSX.V: CLE), and the Escalera Group lithium/uranium project in Peru.

Azincourt Energy is developing the East Preston Uranium Project (assays pending from our recently completed winter drill program). We are fulfilling the critical need for green-field development in the Athabasca, home to the world’s highest grade uranium deposits.

Uranium spot price is up over 30% this year.
