We can transform limited resources to unlimited, by continually perfecting a recycling system that contributes to environmental conservation.

Aida chemical Industries since 1963

We contribute to various kinds of industries with our high quality precious metal products.

Aida chemical Industries since 1963

We continue to explore new possibilities for the use of precious metals.

Aida chemical Industries since 1963

Company Infomation

Aida's history began back in 1963. We initially paid special attention to recycling silver substances which were used as sensitizers in photographic processes. By utilizing our chemical knowledge and experience gained over the years, we established a business that extracts the silver out of industrial use waste liquids and waste films collected from hospitals and photo studios.

Products

We collect, assay, refine and smelt precious metals from jewelry scraps, dental scraps, industrial wastes or any other type of substances containing precious metals. With our high standards of analysis and refining knowledge and skills, we supply high quality Gold, Silver, Platinum, Palladium, Rhodium and Ruthenium to many industries. We also manufacture and offer precious metal powders for industrial use.
