

Our Commitment

We will develop long-term, sustainable mutually beneficial partnerships with our raw material and packaging suppliers, which build a favorable demand for our products and ensure sustain-able returns and the creation of value through the supply chain.

Our Approach

We will build a sustainable supply chain for our business operations in Australia and contribute to the society in the region with consideration for human rights, labor standards, health and safety, the environment, and business ethics.

Initiatives

For establishment of sustainable partnerships with suppliers

Companies are required to take actions with consideration for the environment, safety, labor standards, human rights and corporate ethics, and the same is true for the entire supply chain. Working together with our business partners is important when responding to these requirements within the supply chain. Directed at building a sustainable supply chain, we are conducting various activities, such as participating in initiatives with external parties.
